 Security Breach  
 Letter

February 21, 2013      **Polk County School District**  
                                  **Bartow, Florida**      EDU    DISC      200

Students who paid tuition for education programs may have had their 1098T tax forms sent to the incorrect address. Between 150 and 200 people out of 2,000 were sent to the wrong address because a group of the tax forms were placed in envelopes without being properly separated. Some people received the forms of several people while others never got their tax forms. The district implemented a new step of sampling some of the envelopes in order to review the process before completing an entire batch.

 Media

February 13, 2013      **University of North Carolina**  
                                  **Chapel Hill, North Carolina**      EDU    HACK      3,500

A cyber attack on two servers resulted in the exposure of employee information. The servers were at the UNC Lineberger Comprehensive Cancer Center. Employees, contractors, and visiting lecturers at the Lineberger Center may have had their Social Security numbers or passport numbers exposed. The breach was discovered in May of 2012 and notifications were sent in December of 2012. Fewer than 15 people who were subjects in research studies were also affected by the breach.

February 1, 2013      **Antioch Unified School District**  
                                  **Antioch, California**      EDU    DISC      Unknown

A document with sensitive Worker's Compensation claim information was accidentally sent out with an email to a limited number of Antioch Unified School District employees. Social Security numbers and other information related to current and former employees that reported injuries were exposed. The incident occurred on January 18 and people who received the email were instructed to remove and destroy any saved information contain in the email. Those who received the email were also instructed to provide written verification that they had removed and destroyed the information.

28 (No SSNs)

October 19, 2012	<b>The College of St. Scholastica Duluth, Minnesota</b>	EDU	HACK	or financial information exposed)
<p>Hackers were able to guess the answers to student account challenge questions. The email account passwords of at least 28 students were reset and their account information was most likely accessed. The hackers may have been based in Beijing and most likely gathered the information needed to pass the challenge questions from information on the students' Facebook pages.</p> <p><i>Information</i>  <i>Source:</i> Databreaches.net <span style="float: right;"><i>records from this breach used in our total: 0</i></span></p>				
October 16, 2012	<b>University of Georgia (UGA) Athens, Georgia</b>	EDU	HACK	8,500
<p>The passwords of two University of Georgia (UGA) IT employees were reset and misused by an intruder. Names, Social Security numbers, and other sensitive data of current and former school employees may have been exposed. The breach may have begun as early as September 28, 2012.</p> <p><i>Information</i>  <i>Source:</i> Media <span style="float: right;"><i>records from this breach used in our total: 8,500</i></span></p>				
October 15, 2012	<b>District 202, Plainfield School District Plainfield, Illinois</b>	EDU	HACK	23,000 (No SSNs or financial information exposed)
<p>People who applied online at <a href="http://www.applitrack.com">www.applitrack.com</a> (<a href="http://www.applitrack.com">http://www.applitrack.com</a>) for a job in District 202 may have had their information accessed by a hacker. The hacker sent messages to former and current job applicants and informed them that the Plainfield School District 202 website was breached.</p> <p><b>UPDATE</b> (10/19/2012): A 14-year-old Joliet West High School student was removed from class and taken to a juvenile detention center for his alleged involvement in the breach.</p> <p><i>Information</i>  <i>Source:</i> Databreaches.net <span style="float: right;"><i>records from this breach used in our total: 0</i></span></p>				
October 10, 2012	<b>Northwest Florida State College Niceville, Florida</b>	EDU	HACK	279,000 (At least 200,050 SSNs exposed)
<p>An internal review revealed a hack of Northwest College servers. One or more hackers accessed at least one folder in the server between May 21, 2012 and September 24, 2012. Over 3,000 employees, 76,000 Northwest College student records, and 200,000 students eligible for Bright Future scholarships in 2005-06 and 2006-07 were affected. Bright Future scholarship data included names, Social Security numbers, dates of birth, ethnicity, and genders. Current and former employees that have used direct deposit anytime since 2002 may have had some information exposed. At least 50 employees had enough information in the folder to be at risk for identity theft.</p> <p><i>Information</i>  <i>Source:</i> Databreaches.net <span style="float: right;"><i>records from this breach used in our total: 200,050</i></span></p>				
October 8, 2012	<b>Ohio State University, Harvard University, Stanford University, Cornell University, Princeton University, John Hopkins University, University of Michigan, University of Wisconsin, University of Houston, New York University, University of Maryland</b>	EDU	HACK	Unknown

There is no specific location for this breach.

The University of Texas, University of Colorado, University of Pennsylvania, Duke University, Rutgers University, University of Pittsburgh, University of Florida, Case Western Reserve University, Texas A&M University, Boston University, Purdue University, University of Arizona, Arizona State University, University of Utah, Ohio State College of Dentistry, and additional universities were affected. Universities outside of the United States were also affected.

Each affected university is listed [here \(http://pastebin.com/AQWhu8Ek\)](http://pastebin.com/AQWhu8Ek): http://pastebin.com/AQWhu8Ek

A hacking group called Team GhostShell targeted universities around the world. A total of 53 universities were affected. Most of the data exposed was publicly available, but student, staff, and faculty usernames and passwords were also exposed. It is unclear if any financial information or Social Security numbers were taken from universities.

August 27, 2012 **University of Rhode Island** EDU DISC 1,000  
**Kingston, Rhode Island**

The University of Rhode Island released a notice on their website [here \(http://www.uri.edu/datanotice/\)](http://www.uri.edu/datanotice/): http://www.uri.edu/datanotice/  
 Students and faculty who were associated with the University of Rhode island after April of 2007 may have had their personal information exposed. The information was placed on a server that was not set-up or intended to be used for storing sensitive information. The information was on the College of Business Administration's computer server and included names, Social Security numbers, dates of birth, hire year, rank, and limited compensation information. The information was discovered to be publicly accessible on July 31. It is unclear how long the information was available, but unauthorized access had occurred sometime while the information was exposed.

August 8, 2012	<b>University of Arizona (UA) Tucson, Arizona</b>	EDU	DISC	7,700
----------------	---	-----	------	-------

Those with questions may call UA's incident contact line at 520-621-4746

A UA student ran a Google search and found her private information posted publicly. The data belonged to several thousand people who had submitted their names and tax ID numbers to UA in order to receive payments or reimbursements. Vendors, consultants, guest speakers, and UA students had their names and tax ID numbers exposed in February and early March. Some people had their Social Security numbers exposed in lieu of tax ID numbers. The sensitive data was embedded within a larger set of files being transferred to the UA new financial system. The files were thought to only contain public information.

May 25, 2012	<b>University of Nebraska, Nebraska Student Information System, Nebraska College System Lincoln, Nebraska</b>	EDU	HACK	654,000
--------------	---	-----	------	---------

The University of Nebraska set up a webpage for more information on the breach: <http://nebraska.edu/security>

A University technical staff member discovered a breach on May 23. Staff took steps to limit the breach and there was no clear evidence that any information was downloaded. The Social Security numbers, addresses, grades, transcripts, housing and financial aid information for current and former University of Nebraska students may have been accessed. The database also included the information of people who applied to the University of Nebraska, but may have not been admitted, and alumni information as far back as Spring of 1985. The University of Nebraska was still investigating the extent of the breach as of May 25, 2012.

**UPDATE** (05/29/2012): The University of Nebraska created a [webpage \(http://nebraska.edu/security\)](http://nebraska.edu/security) for information about the breach.

Close to 21,000 people had bank account information that was linked to the student information system and exposed. The University of Nebraska's computer database also held 654,000 Social Security numbers, though it is unclear if that number completely overlaps the number of individuals who had their bank account information exposed. Current and former students of the University of Nebraska campuses in Lincoln, Omaha, and Kearney were affected; as well as anyone who applied to the University since 1985.

**UPDATE** (06/01/2012): The Nebraska College System began using a shared student information system called NeSIS in 2009. This resulted in data from Chadron State, Peru State, and Wayne State colleges being exposed.

**UPDATE** (09/10/2012): Police seized computers and related equipment belonging to a University of Nebraska-Lincoln (UNL) undergraduate student who is believed to be involved in the incident.

**UPDATE** (12/11/2012): The former UNL student has been charged with intentionally accessing a protected computer system and causing damage of at least \$5,000.

March 16, 2012 **University of Tampa** EDU DISC 30,000  
**Tampa, Florida**

A server management error caused files containing sensitive information to be made publicly accessible between July of 2011 and the breach's discovery on March 13, 2012. A classroom exercise revealed that the information was compromised and the University of Tampa's IT office was immediately informed of the discovery. The University of Tampa then notified Google and asked that the cached file be removed from the search engine.

One file included 6,818 records of students who attended in Fall of 2011. Two other files contained the information of an additional 29,540 people and included University ID numbers, names, Social Security numbers, and photos. Some people also had their dates of birth

exposed. The IT office at the University of Tampa concluded that the files had only been accessed by the people who reported the breach.

**UPDATE** (3/22/2012): Additionally, 22,722 current and former faculty, staff, and students who were associated with the University between January 29, 2000 and July 11, 2011 may have had their information exposed. The IT office confirmed that these files had only been accessed by University insiders as well. The University will not cover the cost of credit monitoring services for those who were affected.

------------------	--	-----	------	---

An Excel spreadsheet with student names, addresses, dates of birth, and college ID's was listed online on a password-protected website. The password protection eventually expired and anyone could access the information online. Valencia College hired an unnamed contractor to create a custom page for prospective students to communicate with the college. The contractor then hired an unnamed sub-contractor to work on some of the website. The breach can be linked to that unnamed sub-contractor.

January 29, 2012	<b>Palos Verdes High School Palos Verdes, California</b>	EDU	HACK	Unknown
------------------	--	-----	------	---------

Three students were caught selling quiz answers to students. It was discovered that they had stolen and copied a master key from the janitor's office. They then used the copy of the master key to install keylogging hardware onto the computers of four teachers. The keylogging hardware revealed passwords, which were then used to access the central files of the school network. It is unclear what types of information the students had access to. They used their access to electronically change their grades slightly. The master key copy was also used to access 20 paper tests before they were given. A student who became aware of the black market for quiz materials reported the students.

January 13, 2012 **City College of San Francisco** EDU HACK Unknown  
**San Francisco, California**

The College's electronic systems have been affected by a series of dangerous viruses since 1999. The problem was noticed in 2012 when the College's data security monitoring service detected an unusual pattern of computer traffic. Further investigation revealed that servers and desktops had been infected across administrative, instructional, and wireless networks. Officials believe that it is likely that using a flash drive to transmit information between a campus computer and a personal computer resulted in exposed personal information. It appears that the viruses searched and transmitted data to sites in Russia, China, and at least eight other countries. Banking information and any other personal information that may have been accessed by visitors, students, staff, and faculty on campus computers between 1999 and January of 2012 could have been exposed.

May 27, 2011	<b>San Juan Unified School District Carmichael, California</b>	EDU DISC	4,000
--------------	--	----------	-------

A human resources employee of San Juan Unified uploaded sensitive employee information onto a flash drive. Somehow the information was uploaded onto a website when the employee used the flash drive to perform volunteer work at her church. An employee who Googled their own name discovered that they could also see their Social Security number and other sensitive information. The information was available for six months. San Juan Unified decided to ban flash drives as a result of the incident.

April 13, 2011	<b>Albright College</b> Reading, Pennsylvania	EDU PORT	10,000
----------------	--	----------	--------

Two laptops were stolen from the College's financial aid office in February. The first laptop was stolen between February 11 and 14. The second was stolen between February 18 and 20. College officials delayed notifying the public of the incident until a risk management firm had assessed the extent of the breach. The laptops contained names, Social Security numbers, dates of birth and addresses. The information may have belonged to faculty, staff, graduates, current and prospective students, spouses of any of these groups and parents of students. The laptop believed to have the most personal information was recovered from a man who was selling the item for drug money.

March 22, 2011	<b>Laredo Independent School District</b> Laredo, Texas	EDU PORT	24,903
----------------	--	----------	--------

A disk that contained the Social Security numbers of all students in the Laredo Independent School District was lost or stolen sometime prior to February of 2011.

**UPDATE** (4/7/2011): Between August 2010 and January 2011, CDs that were mailed to the Texas Education Agency (TEA) were lost. The CDs were unencrypted and contained student Social Security numbers, dates of birth and ethnicity. The CDs were sent to TEA so that identifying information could be removed and the information could be passed along to the University of Texas at Dallas Education Research Center. According to a TEA spokesperson, Laredo ISD's data set is missing from a set of other district information that was sent. Though the TEA claims that only Laredo student information was exposed, the information of 164,406 students from eight Texas school districts was sent. The information on the unencrypted disks goes back 20 years. This information includes current and former students in the top 10% of their class who graduated between 1992-2010 from Crowley, Harlingen, Round Rock, Killeen, Richardson, Irving, Mansfield, and Grand Prairie school districts.

October 29, 2010	<b>University of Hawai'i West O'ahu (UHWO)</b> <b>Pearl City, Hawaii</b>	EDU	DISC	40,101
------------------	---	-----	------	--------

Students from the University of Mānoa were also affected.

Unencrypted files that were placed on the faculty web server exposed student information. Student names, Social Security numbers, birth dates, addresses and academic information were placed on the server in December of 2009. Students who attended UHWO in Fall of 1994 or graduated between 1988 and 1993 were affected. A much larger number of students who attended the University of Hawai'i Mānoa between 1990 and 1998 were also affected. The files were removed on October 18 after a privacy group notified the University. The server was quickly removed from the network. The faculty member who accidentally placed the file on the server retired before the breach was discovered.

**UPDATE (11/19/10):** A former student is filing a class-action lawsuit on behalf of students affected by the University of Hawaii's multiple breaches. The man attended the Mānoa campus between 1990 and 1998 and claims that he was affected by the this breach and one that occurred in June of 2009. The names of four other people are attached to his Social Security number and his credit has been used in Georgia. Around 259,000 private records have been exposed by the University of Hawai'i since 2005.

**UPDATE (1/27/2012):** The University of Hawaii will provide two years of credit protection services and credit restoration services to settle a class-action lawsuit involving data breaches that affected nearly 100,000 students, faculty, alumni, and staff between 2009 and 2011. The settlement is still subject to court approval.

People who believe they may have been affected may read the information provided on the University's privacy website at <http://privacy.ufl.edu/> (<http://privacy.ufl.edu/>). The University also has a toll-free privacy line 1-866-876-HIPA.

The University notified former students who took certain computer science classes in 2003 that their information was available online. Names, Social Security numbers and addresses were included in a web-accessible archive created by a faculty member. The University corrected the problem in August of 2010. Notification letters were sent to most students who may have been affected, but the University was unable to contact 54 former students.

September 28, 2010	<b>Maine Department of Education Augusta, Maine</b>	EDU	DISC	Unknown
--------------------	---	-----	------	---------

A technology director from the school district was able to access Social Security numbers of staff members in other districts. The Maine Department of Education has asked school districts to delay submitting student Social Security numbers until the problem has been addressed. According to reports, "For the first time, Maine school districts are collecting students' SSNs for a statewide database intended to help policy makers track students' progress throughout school and college and into the workplace." This practice has been controversial.

February 1, 2010	<b>West Virginia University</b> <b>Morgantown, West Virginia</b>	EDU	DISC	53
------------------	---	-----	------	----

Around 53 West Virginia University students' personal information was available to others following an "operational error" during a routine update of tax information. The students' 1098-T forms, which include their Social Security number and tax identification numbers, among others, were uploaded to the University's 1098-T Web site. The forms are distributed to WVU students who are U.S. citizens who paid tuition during the 2009 calendar year. They can be used to claim federal tax credit. Students can typically access their forms on the site for tax purposes, but the error made the information viewable to any WVU student on the site.

September 25, 2009 **University of North Carolina, Chapel Hill** EDU HACK 236,000  
**Chapel Hill, North Carolina** (163,000 SSNs estimated)

A hacker has infiltrated a computer server housing the personal data of 236,000 women enrolled in a UNC Chapel Hill research study. The Social Security numbers of 163,000 participants were among the information exposed. The data is part of the Carolina Mammography Registry, a 14-year-old project that compiles and analyzes mammography data submitted by radiologists across North Carolina.

**UPDATE** (10/6/10): A lead researcher at the University is fighting a demotion and pay cut that resulted from the data breach in the medical study she directs. It appears that the incident first occurred in 2007 and was not discovered until 2009. An attorney representing the researcher claims that his client is not at fault because the University knew that the program's computer system had security deficiencies in 2006. The University claims that the researcher acted negligently, but the attorney claims that the researcher was not alerted to the security flaws and there is no evidence that the researcher violated or ignored rules in obtaining patient information.

**UPDATE** (5/9/2011): The researcher and University reached a settlement. The researcher agreed to retire at the end of 2011 and will receive her full rank and salary until that time.

-------------	--	-----	------	---------

<http://datatheft.berkeley.edu> (<http://datatheft.berkeley.edu>)

Hackers infiltrated restricted computer databases. Personal information of 160,000 current and former students and alumni may have been stolen. The University says Social Security numbers, health insurance information and non-treatment medical records dating back to 1999 were accessed. The breach was discovered April 21, 2009, when administrators performing routine maintenance identified messages left by the hackers. They found that restricted electronic databases had been illegally accessed by hackers beginning on October 9, 2008 and continued until April 6, 2009. All of the exposed databases were removed from service to prevent further attacks.

May 4, 2009	<b>Kapiolani Community College Honolulu, Hawaii</b>	EDU	HACK	15,487
-------------	---	-----	------	--------

More than 15,000 students at Kapiolani Community College are at risk of identity theft because of an Internet security breach. School officials found that a computer was infected with malware that can steal sensitive data. The computer contained the personal information of 15,487 students who applied for financial aid between January 2004 and April 15. The computer did not have sensitive information, but it was hooked up to a network that had access to names, addresses, phone numbers dates of birth and Social Security numbers.

April 29, 2009	<b>Orleans Parish Public Schools New Orleans, Louisiana</b>	EDU	PHYS	Unknown
----------------	---	-----	------	---------

The confidential records of Orleans Parish public-school employees have been discovered in an abandoned and unsecured warehouse in New Orleans. Personnel files, payroll records, and other documents with private data were uncovered. Inside were countless boxes filled with confidential information, not to mention stacks of other documents lying on the ground, listing payroll information, worker evaluations, notices of personnel action, and investigations into employee discrimination. Also found were full names, home addresses, and Social

Security numbers on document after document.

March 11, 2009	<b>Binghamton University Binghamton, New York</b>	EDU	STAT	100,000
----------------	---	-----	------	---------

Binghamton University kept payment information for every student, possibly dating back at least ten years in a storage area next to one of the most trafficked lecture halls on campus, behind a door that was not only unlocked but taped open. The information itself contained Social Security numbers, credit card numbers, scans of tax forms, business information (including Social Security numbers and salary information for employees of students' parents), asylum records and more, all kept in a haphazard and disorganized fashion, sprawled out in boxes, in unlocked (yet lockable) filing cabinets and shelving units. If the information inside the room pertained only to the current students enrolled and their parents that would mean the story would effect, roughly, forty-two thousand people. However, because the information goes back at least ten years, if not more, the potential number of people effect lies well in the hundred thousands.

November 23, 2005	<b>University of Delaware</b> <b>Newark, Delaware</b>	EDU	HACK	952
----------------------	--	-----	------	-----

Two separate departments were breached by hacking within a short period of time. A School of Education computer with the names and Social Security numbers of 772 students registered in online education courses was attacked in late August. A Department of English computer that had the Social Security numbers of 180 faculty, graduate assistant and other teaching staff from the department was also hacked in August. The larger breach appears to be the result of someone attempting to establish an illegal movie sharing system. The smaller breach was a possible attempt to log onto and control one server in order to gain control over servers of other campuses. Those affected received notification and Social Security numbers have been removed from both servers.

---

November 18, 2005	<b>Indiana University Kelley School of Business Indianapolis, Indiana</b>	EDU	HACK	5,278 (4,778 SSNs reported)
----------------------	---	-----	------	-----------------------------------

Students at the Indianapolis and Bloomington campuses may have been affected.

A hacker may have accessed the names, Social Security numbers and grades of students who enrolled in Introduction to Business courses between 2001 and 2005. The computer may have been hacked and installed with malware as early as August. A representative believes the breach occurred because the files were stored on a computer that did not have current anti-virus and system-protection software.

October 29, 2005	<b>University of Tennessee Knoxville, Tennessee</b>	EDU	DISC	1,900
------------------	---	-----	------	-------

People at any of the University of Tennessee campuses may have been affected.

Nineteen hundred students and employees had their names and Social Security numbers posted on the Internet from spring of 2004 until the discovery in October of 2005. A student searched her name and found it listed with her Social Security number on a UT email discussion group site. Information pertaining to individuals who had either paid or owed small amounts of money to the University was shared among 10 employees and the information technology office. The information was mistakenly coded as public rather than private.
